

Luxalfex® PowerView®

Internal battery options.

The internal battery option for PowerView Gen 3 will now last longer than previous Generations, because we are using Bluetooth low energy as our communication protocol.

We have also introduced more internal rechargeable battery options. The list below will confirm which charger/power cable must be supplied with the relevant motor.

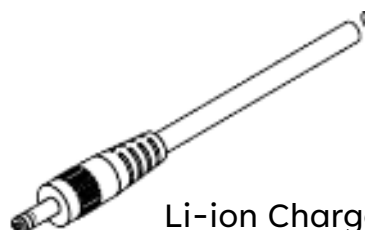

Please note the following points:

Blinds will NOT operate whilst being charged.

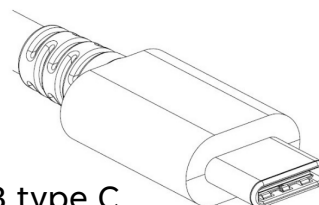

To full charge a battery will take on average 4hrs

Blinds are supplied with a 'trickle' charge - which could be between 5 - 33%.

Please make sure blinds are fully charged when installed.

Li-ion Charger
