# BlocOut™

Award winning blind, the BlocOut™ is capable of blocking light and draughts thanks to the exceptional quality of its individual components. Each part, from the brush seals to the cassette holder and aluminium frames are designed to last. BlocOut™ blinds come in a wide range of colours and patterns to suit a variety of environments and tastes.

Curtains trap hot air and prevent it circulating the room. This can lead to heat loss. BlocOut™ creates an energy efficient barrier that minimizes heat loss through the window and leaves radiators free to heat a room faster.

Features
Bloc Blinds incorporate a number of specially developed features that enhance the premium quality of our blinds;

Cassette
The fabric which is around the spring and barrel mechanism is completely enclosed, the siderails slot into cassette ends on installation.
Child Safe
The blind is operated via spring system. The blind pulls down through the siderails locking in place when the handle is released. The handle is then pushed in towards the window releasing the lock which enables the spring to retract the fabric. There are no cords.

Seal
Brush and rubber seals are attached to the bottom of the handle, when the blind is closed, they create a barrier between the blind and sill, blocking out light and reducing heat loss.
Pips
Pips are attached to the fabric to ensure the blinds stays securely within the runners at all times.

Brush Seals
These create a barrier between the blind and the window frame, blocking out light and reducing heat loss.

Fixing Components

Left & right Guide Dogs for recess fix.

3 white primed 9mm x 44mm wooden batons used in the inside of recess fix only.

Product Dimensions

A. Cassette height: 60mm
B. Frame width: 32mm
C. Cassette depth: 52mm

PRODUCT SIZE LIMITS
Min width: 400mm
Max width: 1800mm
Min drop: 300mm
Max drop: 1500mm

Product tolerance limits

To ensure correct operation and full bloc out performance the blind can only work within limited window reveal tolerances i.e. the window must be as square as possible, fitting a blind into or on the edge of a window recess outside of the stated tolerances will lead to poor operation, reduced bloc out performance and or product damage.

The cassette will always be made to the top width (A)
The bottom width (C) Can have no more than + 6mm variation from the top width
The height measurements (D) (E) (F) must not have a variation of more than +/- 6mm.

Operation

The blind is operated via a spring tension system using the handle at the bottom of the blind. The blind simply pulls down through the siderails locking whenever the handle is released, the handle is then pushed in towards the window releasing the lock which enables the cassette to retract the fabric. To ensure correct operation the user must operate the blind with 2 hands held centrally on the handle not to one side of the blind.

Care

To keep the blind looking it's best through time the customer must ensure the product has been installed and operated securely and correctly, the fabric can be cleaned with a synthetic or feather duster and can be wiped lightly with a damp cloth.

Maintenance

All our products are manufactured using aluminium and glass reinforced nylon components, they do not present any corrosion problems in normal working environments. If there is a failure of a blind, a component can be replaced without the need for a new complete blind.

Replaceable components:

Handle ends (brakes)
Siderail feet
Siderails.
